Fine Cu wire comprises 0.1-9 ppm Ti, 0.2-9.5 ppm as a total amt. of one
or
Ta, more of respectively 0.1-9 ppm Nb, Mg, Ca, rare earth elements, Hf, V,
Pd, Pt, Au, Cd, B, Al, In, Si, Ge, Pb, P, Sb, and Bi, and
balance Cu. Th purity of balance Cu is 99.999
wt.% or over. The fine Cu wire is made by repeating wire drawing and
annealing the Cu ingot which was cast in vacuum or non-oxidising atmos.,
to specified wire dia., in which final working ratio is made to
70-99.99%,
and annealing is done to be 2-20% elongation. After the annealing, 1-5%
redn. of area is applied to obtain 2-20% elongation.
USE/ADVANTAGE - The fine Cu wire made by the method is used for
bonding wire used in making semiconductor.
